

Earth's Choice biodegradable binders are made using an all natural organic additive. These new polpropylene binder covers biodegrade in one to five years time versus the hundreds of years it takes normal plastic binder covers. Products are completely reusable with unlimited shelf life and will not start to biodegrade until disposed of in a microbial landfill. All contents are 100% recyclable. Archival and environmentally safe polypropylene will not lift copy. Overall binder contains over 47% post-consumer material and chipboard is made from 100% recycled material.

- Good for the planet, Eco-Friendly
- Polypropylene cover formulated to biodegrade in microbial landfills within 1-5 years
- All natural organic additive that is safe and non-toxic
- 100% recyclable
- Contains over 47% post-consumer recycled material
- Reusable – Unlimited shelf life
- No print transfer
- Archival and environmentally safe polypropylene
